

Lateral Transfer Practical

DIRECTIONS: Review the Lateral Transfer video in HILT U. Mark whether the candidate completed the task correctly or incorrectly.

Task	Correct	Incorrect	Notes
<u>Load a patient onto the HILT</u>			
Loaded and stabilized the patient onto a full length HILT using the Lift and Carry a Supine Patient steps.			
<u>Transfer onto a wheeled stretcher from a patient's side with at least two team members</u>			
From one side of the patient, deployed the needed number of extenders according to the number of patient attendants.			
Inserted hands into handles, in unison pulled the patient sideways from the bed onto the wheeled stretcher.			
Verbalized the need to keep the wheeled stretcher stable and not drop the patient during the transfer.			
<u>Pivot a patient in bed with at least four team members</u>			
Deployed the 1 st and 2 nd sets of extenders along one side of the patient's upper body.			
Deployed the 1 st and 2 nd sets of extenders along the opposite side of the patient's lower body.			
Inserted hands into the handles and, in unison, pivoted the patient in the bed.			
Deployed extenders opposite of those first deployed.			
In unison, two patient attendants at one end of the patient pulled the patient approximately one-half way off of the bed.			
Remaining patient attendants insert hands into handles and, in unison, pulled the patient fully off the bed.			
Verbalized the need to prevent the patient from dropping during the transfer.			
<u>Pull a patient from one end of bed with at least four team members</u>			
Deployed the 1 st and 2 nd sets of extenders from both sides of one end of the patient.
